

# CIRCULAR ECONOMY BEST PRACTICES IN THE FURNITURE SECTOR

## *Resol Toledo Aire Armchair Green Edition*

### *Why is it a success?*

The Toledo chair - like the entire Resol Green Edition range - is made of 100% recycled materials, resulting in a 100% recyclable product with an optimised weight. The company is a pioneer in the use of advanced gas injection systems in its products. This allows furniture to be created with a considerable reduction in weight and therefore with a reduction in the CO<sub>2</sub> footprint.

### *Lessons learnt*

In 2018 Resol began a project for the development of post-consumer recycled materials, which in 2020 led to the GRITEK® formula. This consists of a high-quality post-consumer recycled polypropylene, that allows Resol to offer customers a new range of sustainable products.

### *Producer*

Resol is a furniture company founded in 1961 with more than 50 million chairs sold to date.

### *Challenges*

Resol is a furniture manufacturer that uses plastic as a raw material. The company's challenge with the Green Edition has been to make sustainable, beautiful, and affordable plastic furniture. The Green Edition products are recycled, recyclable, have a longer lifespan and are less intensive in raw materials.
