

CIRCULAR ECONOMY BEST PRACTICES IN THE FURNITURE SECTOR

Phoenix

Why is it a success?

Phoenix chairs can be disassembled and re-assembled, for an easy repair and remanufacturing. Offecct uses leftover material from some production lines to design high-quality products, turning waste into a resource. This also allows Offecct to collect its own products back with the aim of remanufacturing and replacing them on the market.

Lessons learnt

Creating high-end furniture out of different waste streams, combining high value with sustainability.

Producer

Offecct is a Swedish furniture company that develops innovative design with a focus on people, architecture, high quality and sustainability.

Challenges

Offecct has developed and tested different concepts of circular models. The successful challenge was to be able to find new ways of creating customer value and at the same time work with sustainable development.
