

CIRCULAR ECONOMY BEST PRACTICES IN THE FURNITURE SECTOR

RH New Logic work chairs collection

Why is the collection a success?

The RH New Logic work chairs collection is designed for easy disassembly, repair and recycling. It is largely composed of post-consumer recycled (PCR) plastics and of fabrics made of 100% recycled PET. Seat and back cushions can easily be clicked on and off, enabling changeable parts and prolonging product lifetime. Through patented 'drawstring spindle' there is no need for glue or staples either. RH New Logic is prepared for a long lifespan and thanks to modular design, it is possible to upgrade, repair and remanufacture it in an easy manner.

Lessons learnt

PCR plastics can be used for structural and complex components, when deliberately designed for this purpose. Smart solutions and functions can be integrated in products with a reduced number of components.

Producer: Flokk

Flokk, Swedish furniture producer, develops products with ecodesign criteria as a basis.
